

The Great White Shark

11 Great white sharks are the top of the ocean's food chain.
22 They are the biggest fish on our planet which eat other
32 fish and animals. They are known to live between thirty
45 and one hundred years old and can be found in all of the
55 world's oceans, but they are mostly found in cool water
59 close to the coast.

69 Even though they are mostly grey, they get their name
78 from their white underbelly. The great white shark has
89 been known to grow up to six metres long and have
99 up to three hundred sharp teeth, in seven rows. Their
109 amazing sense of smell allows them to hunt for prey,
119 such as seals, rays and small whales from miles away.

Quick Questions

1. Why do you think that the great white shark is at the top of the ocean's food chain?

2. Where are most great white sharks found?

3. Find and copy the adjective that the author uses to describe the shark's sense of smell.
